

# banking and finance

In an environment where milliseconds can mean the difference between making money and losing money, network latency is not an option. Even so, speed is not enough. Privacy and security are essential to an institution's reputation and standing. That's why we're building the fast, secure networks banking and finance firms need to be competitive and innovative in today's world.

## Networks that support today's financial industry.

Banking and financial institutions need the ability to send important data and transactions within and across locations—quickly and securely. At the same time, clients expect to have 24/7 access to their accounts and services. We offer solutions to help you meet the demands of customers and regulators, while giving you the room to innovate and grow.

### PRIVATE NETWORKS

A custom, dedicated fiber network provides a fast, secure, and reliable connection across an entire organization.

### ULTRA-LOW LATENCY

High-frequency traders can conduct transactions between financial centers with lower latency.

### OPTICAL ENCRYPTION

Protects confidential information in-flight to prevent costly data breaches without impacting efficiency.

### NEXT-GEN TECHNOLOGY

A robust network can support advanced AI, business automation services, platform-as-a-service technologies, and more.
