

fiber

Fiber plays an important role in all our lives. You'll find it everywhere—from the small cells that power our wireless networks, to the enterprise solutions that allow businesses to digitally transform. It's simply the fastest, most efficient way to transmit and receive massive amounts of data. And as exciting new technologies like autonomous cars and augmented reality apps continue to emerge, they'll all need fiber too.

Fiber where you need it.

With one of the largest, densest metro fiber networks in the country, we've enabled thousands of businesses to transport data, connect to the cloud, and access remote data centers—all at light speed. We serve organizations across multiple industries including healthcare, education, media, finance and banking, and more. And, our fiber is also used to deploy new innovations like 5G, CBRS, and smart city technologies.

CLOUD CONNECT

Our fiber network can provide a direct, lightning-fast connection to your AWS cloud.

FIBER NETWORKS

A custom fiber solution gives organizations the control and flexibility they need to meet their bandwidth and security needs.

ADDED FIBER SOLUTIONS

Organizations can get the most out of their networks with added products that address their specific needs—from Cloud Connect to Video Transport to Optical Encryption solutions.

SMALL CELLS AND TOWERS

Fiber-supported small cells and towers give cellular networks the ability to handle the increasing amounts of data being transmitted wirelessly.
