

Strengthening a bank's network with SD-WAN.

A financial services company sought a new network solution that securely supports their professional applications. The network enables them to use low cost, high-speed internet as a business class solution that secures and prioritizes their critical finance applications.

The Need

The customer was utilizing a legacy MPLS solution, which was costly and did not meet its scalable business and network requirements. Feeling restricted on what network control they had, along with minimal network and application analytics, the customer selected a SD-WAN (software-defined wide area network) solution.

The Solution

By implementing our Managed SD-WAN solution, we were able to improve the customer's site-to-site connectivity with a lower per branch WAN infrastructure cost. The customer enhanced their cloud application performance with a single-pane-of-glass management and policy framework. This provided the business with the visibility, analytics and control that they were looking for.

Managed SD-WAN

The Impact

- › Scalable & quick deployment of next-gen technology
- › Increased WAN resiliency
- › Enhanced network security with Next Generation Firewall & URL filtering
- › Robust set of visibility & control, including analytics and reporting

“

We helped the customer implement a low cost option that improved their network security, allowing them to prioritize their financial applications.

CHRIS CHIRICO

Managing Director, Sales Engineering
Crown Castle

Why Crown Castle?

When you work with us, you get a partner who is dedicated to understanding your needs and delivering a solution to run your organization today—while setting the stage for tomorrow’s most transformative innovations.

Expertise

Over the last 25 years, we’ve built and maintained fiber networks for over 10,000 customers.

Consultation

We take the time to carefully consider all your needs and deliver a solution that meets your business requirements and opens up new opportunities.

Service

Our locally based service teams work closely with you to consult, design and deliver solutions that meet your needs, while our state-of-the-art Network Operation Center works around the clock to keep your network running.

Stability

We are the last owner of our networks, and an S&P 500 company with a history of building and operating infrastructure around the country.

Crown Castle owns, operates and leases more than 40,000 cell towers and approximately 85,000 route miles of fiber supporting small cells and fiber solutions across every major US market. This nationwide portfolio of communications infrastructure connects cities and communities to essential data, technology and wireless service—bringing information, ideas and innovations to the people and businesses that need them.
