

Why fiber?

The unparalleled capabilities of fiber create limitless opportunities for your organization.

What is fiber? A secure, adaptable, high-capacity network cable that consists of glass fibers inside an insulated casing that moves data at the speed of light and over long distances without interference.

Flexible and scalable

- › Customizable for the configurations, services and applications you need.
- › Scales to virtually any bandwidth without the need for costly and disruptive upgrades.

High-speed

- › Speeds available up to 100Gbps.
- › Symmetrical upload and download speeds.
- › Resistant to “peak usage time” slowdown.

Reliable

- › Private physical network infrastructure and dedicated strands of fiber maximize security.
- › Industry leading service level agreements provide peace of mind.

Safe

- › Highly secure and nearly impossible to hack.
- › Electricity is not involved, so fire hazards are not a concern.
- › Can sustain significant levels of pressure.

Robust

- › Protected against temperature fluctuations, severe weather conditions and moisture.
- › Extremely slow material degradation.
